

Klangwirkstoff Records

CD
Catalog#: KW005
LC 16011
Total Playtime: 77.14 min.
Releasedate: 01.02.2010
EAN: 4 036067 305327
Cover: Ilona Kowalschek

Distribution: www.silenzio.de
Label: www.klangwirkstoff.de
Bandwebsite: www.akashaproject.de

The Magic of Quantum Music

The Berlin label Klangwirkstoff Records releases electronic ambient music based on the philosophy of the cosmic octave. Klangwirkstoff is a catalyst in music theory and it deals with the influences of deduced rhythms, resonances and frequencies in nature.

With their fifth cd-release, Klangwirkstoff presents a decade of scientific harmonic music research from Akasha Project on the topic of the cosmic octave and molecular soundtracks.

Akasha Project

**H2 - The Quantum Music of Hydrogen
Der Klang der Wasserstoffatome
77:14 min**

Acoustic description of the electron jumps of hydrogen

Based on the frequencies calculated by Hans Cousto in 1999 „H2 -- Der Klang der Wasserstoffmolekuele“ (H2-The Sound of Hydrogen) the composer and sound artist Barnim A. Schultze aka Akasha Project developed a special composition method for the octave analog transposition of measurements of the spectral data (resonance maxima) of hydrogen atoms.

This work and the production of a preferably pure description of the harmonic conditions on the microcosmic quantum level was created over a period of ten years.

The result is a harmonic sound sculpture, created on the base of a „self-composing“ musical process, which can give an impression about what holds the world together in its core.

Quantum music is hearing the world (Akroasis).
